

PRESS RELEASE  
October 2011

## **Another milestone for Chromatech Ultra**

Chromatech Ultra, the steel and special plastics warm-edge profile for IG by Rolltech, has received the prestigious CEKAL certification, showing once again that it is one of the most valid technologies on the market. This product now has full access to the French market thus opening up important new prospects for the company and the entire Glass Alliance network of which Rolltech is a member along with Alu-Pro and Fenzi.

This certification is a prestigious recognition for Chromatech Ultra because of the special quality standards and criteria required. In fact, CEKAL certification sets requirements that only high quality industrial methods and products of advanced design can meet. These requirements apply to both product performance and the quality of the raw materials. CEKAL tests for spacer bars made from a combination of materials, as is the case with Chromatech Ultra, are the most advanced and complete in Europe. Each single material is accurately tested and the entire supply chain is examined to ascertain traceability. On top of this, special tests are performed to check for resistance to UV radiation and humidity as well as profile durability.

Only the best products pass these tests and are therefore placed on the market.

It means that products which conform to CEKAL certification are a greater guarantee for final consumers.

This milestone once again demonstrates the high performance of Chromatech Ultra: by combining the stability and resistance of steel and the excellent insulating properties of polycarbonate in a single structure, it guarantees significant benefits in terms of heat insulation and very low thermal transmittance. This innovative profile also ensures ease of use: it can be bent without any need for expensive machinery, allows perfect results to be obtained with resistant, excellent quality angles, as well as very rigid frames because of its dual layer structure.

All Rolltech products are developed and made using the latest technologies. As a result, Chromatech Ultra's patented design and special production processes can guarantee final products of an excellent quality.
