October 2011

STEADILY GROWING DEMAND FOR HOTVER 2000 IN UK

Hotver 2000 , the high performance sealant by the Fenzi group, has become one of the most-in-demand brands on the UK market because of its mechanical properties and easy, fast use.

Hotver 2000 is a one component hot-melt sealant developed by Fenzi laboratories for quality IG production. Its excellent physical-chemical properties offer excellent thermal insulation of the unit, especially when used with non-metal flexible spacers. Hotver 2000 boasts the lowest gas leakage rate for the best thermal performance.

Another very popular feature of the Hotver 2000 range is that it is extremely practical, which makes for easy use and reliability. All Hotver 2000 hot-melt sealants can be used for either single or dual seal units, ensuring perfect adhesion to the glass and spacers. They are suitable with both manual pumps and robotic extruders, thereby guaranteeing easy processing and excellent resistance at both low and high temperatures. IG manufacturers can now count on a product that combines very high quality performance with quick fixing and excellent results in terms of unit integrity and durability. Thanks to the lowest MVTR (moisture vapour transmission rate) in class, Hotver 2000 ensures a longer unit life.

This practical, easy to use, affordable and yet robust product is fully certified and compliant to EN1279 PT2/PT3 and PT4 for peace of mind. Hotver 2000 can be used to replace any other hot melt sealant without further testing.

As a result of these special features and the ensuing optimized production costs, Fenzi hot-melt sealants have taken over a large share of the UK market in recent months.

Hotver 2000 is produced in the plants of the Fenzi group, a leader in chemicals for flat glass reprocessing that has been committed to innovation in IG units for more than 30 years. The group is known internationally for its quality products, reliability and ability to offer a sales and assistance service that is highly appreciated worldwide; Fenzi has thus become the main contact for all IG manufacturers, also because of a widespread distribution guaranteed by the Glass Alliance network that also includes Rolltech and Alu-Pro, leading manufacturers of warm-edge profiles for IG.
